Archiving Application Data (CA-ARC)5

Archiving Application Data (CA-ARC)

Data Archiving removes from the database application data that is no longer required, and places it in archive files that can be accessed and analyzed at a later date.

The cross-application archiving documentation is structured as follows:

- One **application-specific section** per component (for example, FI, TR, CO)
- One [introductory section \[Extern\]](#) that is identical for all components, and that can be called directly from the application-specific section

For information on related topics, refer to:

- [The Archive Development Kit \(ADK\) \[Extern\]](#)
- [Content Management Service \[Extern\]](#)
