Wage Type Statement

Definition
The wage type distribution is a list that gives you an overview of the wage types in the in-period view. The system evaluates the payroll results from results tables RT and CRT and determines the original payroll result and the retroactive accounting results created in the period in question.

The system also evaluates the employee’s organizational assignment. This is included in the payroll results. This data is taken from the Work Center Basic Pay table (WPBP).

Use
You can use the wage type statement to

- Identify errors that have occurred during the payroll run
- Cumulate payroll data belonging to an organizational unit
- Have an additional, detailed control medium for revisions

The following evaluation options can be used when creating the wage type statement:

- Individual evaluation
  This type of evaluation is performed for each personnel number. The number and amount is printed for each wage type. The individual evaluation can be sorted according to personnel number or employee name within the organizational assignment.

- Totals evaluation
  This type of evaluation is performed without specification of personnel number and name. The selected wage types are cumulated and printed for all selected personnel numbers. The totals evaluation can only be sorted according to organizational assignment.

Wage type statements can only be created for one country. Personnel numbers that are assigned to another country are listed in the error log.
Creating a Wage Type Statement

Prerequisites
Payroll results exist.
You are in the initial screen for Payroll.

Procedure
1. In the SAP Menu choose Human Resources → Payroll → Information Systems → Wage Type → Wage Type Statement.
2. Enter the appropriate values in the fields, and set the indicators required.

   If you do not enter a wage type, the SAP System selects all wage types that are in the internal Results tables RT or CRT for the selected payroll result.

   If you flag the New Page Per Wage Type field, each new wage type is printed on a new page in the individual statement. This parameter is not used in totals evaluation.

   In the Reference Period field, you can enter a payroll period as a comparison period. The results of the comparison and the absolute and relative differences between the wage types will then be printed on the wage type statement. The comparison values that are generated when a reference period is used cannot be printed on the form.

   If you flag the Read Cumulated Results field, the cumulated annual values for the results table CRT are read and formatted for the wage type statement.

   In the Totals Formation group, you can change the standard output by changing one of the sort criteria.

3. Choose Program → Execute or Execute + Print or Execute in Background.

Result
A wage type statement is displayed.
